Continuation of 5. does NOT place the application in condition for allowance because: heating from below was an obvious way for melting Si. Also, the throughput would have been increased with no solidification of raw material in the crucible between pulling cycles. The argument of hindsight reasoning is not persuasive in that the motivation of more product made is hardly unobvious to one of ordinary skill. The argument that Ito et al. teaches only melting the raw material after charging is not persuasive. Ito fully melts the charge after charging but does not rule out molten remnant raw material in the crucible from previous pulling cycles..
